PROFESSIONAL SUMMARY

Dedicated Software Engineering student (Semester 4) at Information Technology University, Lahore, with strong foundations in C++, Data Structures & Algorithms, and Software Design & Architecture. Experienced in building modular, structured applications through academic projects. Passionate about backend development and scalable system design. Seeking an internship or entry-level opportunity to contribute technical and problem-solving skills in a dynamic engineering environment.

EDUCATION

BS Software Engineering | Information Technology University (ITU), Lahore 2024 – 2028 (Expected)

- Relevant Coursework: Programming Fundamentals, Object-Oriented Programming, Data Structures & Algorithms, Software Design & Architecture
- Currently in Semester 4 with hands-on academic project experience

TECHNICAL SKILLS

Programming Languages: C++

Core Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Software Design & Architecture

Backend Development: Console application development, modular system design, backend logic building

Tools & Technologies: Git, GitHub, Docker (basic), Kubernetes (basic)

Soft Skills: Team Collaboration, Problem Solving, Analytical Thinking, Time Management

PROJECTS

Hospital Management System | *Programming Fundamentals*

- Developed a console-based system with OPD and Lab Management modules using C++
- Implemented patient record handling and data management with structured file organization
- Designed modular architecture separating different hospital department functionalities

Library Management System | *Object-Oriented Programming*

- Designed and implemented a Book Management module applying core OOP principles
- Utilized classes, objects, inheritance, and encapsulation for modular and maintainable design
- Structured the system to support future extensibility and scalable module additions

Logistics & Supply Chain System | *Data Structures & Algorithms — Group Project*

- Developed the Shipment Tracking module as part of a collaborative team project
- Applied data structures (queues, linked lists) for efficient shipment tracking and data retrieval
- Coordinated with team members for integration of modules into a unified system

ACADEMIC EXPERIENCE

- Strong grip on problem-solving and logic building using C++ through coursework and projects
- Experience developing modular, structured programs across individual and group-based assignments
- Consistently applied theoretical concepts (OOP, DSA) to practical software implementations
- Demonstrated ability to collaborate in team settings and deliver functional academic projects on time

AREAS OF INTEREST

- Backend Development — building server-side logic and APIs
- Application Development — developing scalable, user-focused software
- Scalable System Design — learning distributed systems and architecture patterns
